Statement: Sustainable Sourcing of Boswellia

This is to confirm that the Boswellia resin used in our products is sourced sustainably. We are committed to environmental stewardship and ethical sourcing practices throughout our supply chain.

- We work closely with our sourcing partners in the area to guide them about proper harvesting techniques to avoid exploitation of Boswellia trees.
- A very important factor in determining the health of the Boswellia trees which in turn determines the sustainability of Boswellia resin is to have a look at the forest land use. The Boswellia resin is found in multiple states but the majority of the resin comes from the forests of Madhya Pradesh. Unlike some of the other forest areas in India, the forests of Madhya Pradesh where Boswellia trees are found are not densely populated. As a result there has not been exploitation of land and its resources in the area due to land use for agriculture, industry and urban development.
- The Indian government also plays an important role in the entire process as they regularly keep stock of the situation for important forest resources with Boswellia being one of them and regularly keep an inventory of the Boswellia trees. As per the assessment by the Indian forest service department, the Boswellia trees are in abundance as they are found over multiple states and there is no perceived threat to its population.
